#Assignment 4

1. What does the **ls -lh** command do, and how is it different from **ls -l**?
 - a. **ls -lh** is similar to **ls**, but it shows the file sizes in human understandable terms. Such as KB, MB, or GB. And **ls -l** shows the file info in long format. With the file size in bytes.

```
viplav@LAPTOP-3K0JQHCJ:~/linux_class/week4$ ls -l
total 24
-rw-r--r-- 1 viplav viplav  25 Feb  3 10:07 alpha.txt
-rw-r--r-- 1 viplav viplav 1841 Feb  3 11:20 lab5assignment.txt
-rw-r--r-- 1 viplav viplav  697 Feb  3 09:50 pipe.txt
-rw-r--r-- 1 viplav viplav   40 Feb  3 10:02 secret.txt
-rw-r--r-- 1 viplav viplav  542 Feb  3 09:53 shell.txt
-rw-r--r-- 1 viplav viplav  543 Feb  3 10:15 story.txt
viplav@LAPTOP-3K0JQHCJ:~/linux_class/week4$ ls -lh
total 24K
-rw-r--r-- 1 viplav viplav  25 Feb  3 10:07 alpha.txt
-rw-r--r-- 1 viplav viplav 1.8K Feb  3 11:20 lab5assignment.txt
-rw-r--r-- 1 viplav viplav  697 Feb  3 09:50 pipe.txt
-rw-r--r-- 1 viplav viplav   40 Feb  3 10:02 secret.txt
-rw-r--r-- 1 viplav viplav  542 Feb  3 09:53 shell.txt
-rw-r--r-- 1 viplav viplav  543 Feb  3 10:15 story.txt
```

- b. viplav@LAPTOP-3K0JQHCJ:~/linux_class/week4\$
2. How can you use **ls** to **show hidden files** in a directory?
 - a. Using the **-a** flag would display any hidden files also.
3. Which **ls** **flag** helps in **sorting files by modification time**, and how do you use it?
 - a. The **-t** flag sorts files by modification time. Using **-lt** shows the file information in long format sorted by time (newest first). Sorting in reverse order is **-ltr**.

```
viplav@LAPTOP-3K0JQHCJ:~/linux_class/week4$ ls -lt
total 24
-rw-r--r-- 1 viplav viplav 1841 Feb  3 11:20 lab5assignment.txt
-rw-r--r-- 1 viplav viplav  543 Feb  3 10:15 story.txt
-rw-r--r-- 1 viplav viplav   25 Feb  3 10:07 alpha.txt
-rw-r--r-- 1 viplav viplav   40 Feb  3 10:02 secret.txt
-rw-r--r-- 1 viplav viplav  542 Feb  3 09:53 shell.txt
-rw-r--r-- 1 viplav viplav  697 Feb  3 09:50 pipe.txt
viplav@LAPTOP-3K0JQHCJ:~/linux_class/week4$ ls -ltr
total 24
-rw-r--r-- 1 viplav viplav  697 Feb  3 09:50 pipe.txt
-rw-r--r-- 1 viplav viplav  542 Feb  3 09:53 shell.txt
-rw-r--r-- 1 viplav viplav   40 Feb  3 10:02 secret.txt
-rw-r--r-- 1 viplav viplav   25 Feb  3 10:07 alpha.txt
-rw-r--r-- 1 viplav viplav  543 Feb  3 10:15 story.txt
-rw-r--r-- 1 viplav viplav 1841 Feb  3 11:20 lab5assignment.txt
```

b.

4. What is the difference between **ls -R** and **ls -a**?
 - a. ls -R shows all files in the current directory and all subdirectories. And ls -a shows all files, including hidden ones, but in the current directory only.
5. What happens when you run the **touch myfile.txt** command if myfile.txt already exists?
 - a. It doesn't delete the file, or overwrite the data. It just updates the timestamp as if it was "saved" or "updated".
6. How can you use **touch to create multiple files** at once?
 - a. Using touch to create multiple files in one command just requires us to list the filenames after the touch command.
 - i. Example: (touch file1.txt file2.txt file3.txt)
7. What does the **du -sh** command do, and why is it useful?
 - a. du stands for disk usage, -s stands for summary, and h for human readable. This command will show the total size of a directory, including all the files and subdirectories. And it will show it in an easy human understandable method.
8. How can you list the **disk usage of all subdirectories** inside a folder using **du**?
 - a. Adding the --max-depth flag.
 - i. Example: (du -h --max-depth=1)
9. What is the difference between **df -h** and **df -i**?
 - a. df -h and df -i show similar info, but the difference is the metric. -h shows it in human readable size formats. And -i shows it in inode usage.
10. How do you **compress a file with gzip** while keeping the original file unchanged?
 - a. Using the -c flag would allow us to keep the original. We would also have to redirect the output to a new location.
 - i. Example: gzip -c file1.txt > file1.txt.gz
